

SL Aesthetic Clinic Introduces Sofwave® - The Latest in Non-Invasive Skin Rejuvenation and Acne Scar Reduction

Singapore, June 7, 2024 – SL Aesthetic Clinic is excited to announce the addition of Sofwave®, an innovative, FDA-cleared technology that utilises ultrasound waves to effectively and safely rejuvenate skin, reduce wrinkles, smooth acne scars and improve the appearance of cellulite.

[Sofwave®](#) is a medical ultrasound device that uses a patented technology known as SUPERB™ (Synchronous Ultrasound Parallel Beam) to generate heat at a precise depth of 1.5mm in the mid dermis. This stimulates neocollagenesis and ne elastinogenesis, leading to skin tightening and rejuvenation.

The non-invasive device also comes with an integrated cooling mechanism (SofCool™) to protect the skin during treatment, especially when dermal temperatures reach 55-65°C, the optimal range for breaking down collagen and elastin fibers. While Sofwave® is primarily used for softening wrinkles and lax skin around the eyebrows and neck, it was recently FDA-cleared for reducing skin laxity of the arms and the appearance of cellulite on the thighs and buttocks.

Most importantly, Sofwave® meets a critical need in the aesthetic market by offering a powerful solution that effectively tightens and rejuvenates skin without the downtime of aggressive lasers and without requiring inconvenient multiple sessions. In Sofwave®'s clinical trials, results have been shown in as little as after one treatment.

Sofwave® joins SL Aesthetic Clinic's repertoire of high quality skin tightening treatments, which includes Ultherapy, Thermage FLX, Fotona 6D Pro and Sylfirm X.

"At SL Aesthetic Clinic, we are always on the lookout to bring in the latest and most effective treatments to our clients," says Dr. Gabriel Wong, Senior Medical Director of SL Aesthetic Clinic. "With Sofwave®, we can offer our patients more options tailored to their specific needs, especially those looking to lift and tighten early signs of saggy skin and improve their acne scars without downtime. Our team has experienced impressive results firsthand, and are confident in its effectiveness for our patients."

Dr Wong further emphasises, "What sets Sofwave® apart is its ability to deliver results fast. Our patients lead busy lives, and they deserve treatments that fit into their schedules without compromising on effectiveness or safety. With Sofwave®, we can achieve significant improvements in skin texture and firmness in just one session, making it an ideal choice for those seeking immediate yet long-lasting rejuvenation."

Sofwave® is a 30-45 minute lunchtime treatment with no downtime. It is safe for all skin types and very well tolerated by patients. Prices start at **\$600 for under eye tightening, \$2800 for a full face treatment, \$800 for acne scar reduction and \$3000 for body treatment such as upper arm skin laxity.**
